

Markdown to PDF/UA

This page was typeset from Markdown – and is fully tagged.

Rendered with **glu** (boxes and glue). The YAML front matter declares format: PDF/UA, lang: en and a title: – that is all it takes. From those three lines glu automatically writes StructTreeRoot, MarkInfo, /DisplayDocTitle, /Lang and the XMP tag pdfuaid:part 1.

What is structurally tagged here

- Headings build the outline tree (H1, H2).
- Paragraphs become P, lists become L / LI.
- The figure below is a Figure element with /Alt text.
- Code blocks are emitted as Code.

Acrobat, NVDA and PAC all see this as a properly structured document – no artifacts, no untagged content.

Front matter

```
---
title: _Markdown_to_PDF/UA_with_glu
lang: _en
format: _PDF/UA
---
```
